AMENDMENTS TO THE CLAIMS

1. (Currently Amended) A polishing composition for memory hard disk comprising water having a pH of from 1 to 4.5 and an abrasive consisting essentially of silica particles, wherein the silica particles have a particle size distribution wherein silica particles having a size less than 40 nm are present in said composition, and in which a relationship of a particle size (R) in nm at a range of from 40 to 45 nm and a cumulative volume frequency % (V) in a graph of particle size-cumulative volume frequency obtained by plotting a cumulative volume frequency (%) of the silica particles counted from a small particle size side satisfy the relationship where the cumulative volume frequency (V) in % is determined to be equal to or greater than the sum of the particle size (R) in nm plus and 50,

wherein the silica particles have a particle size distribution wherein silica particles having a size of from 10 to less than 40 nm are present in said composition, and

wherein the particle size is determined by observation with a transmission electron microscope (TEM).

- 2. (Original) The polishing composition according to claim 1, wherein the silica particles are colloidal silica particles.
- 3. (Original) The polishing composition according to claim 1, further comprising at least one member selected from the group consisting of acids, salts thereof and oxidizing agents.

- 4. (Original) The polishing composition according to claim 2, further comprising at least one member selected from the group consisting of acids, salts thereof and oxidizing agents.
 - 5. (Canceled) The polishing composition according to claim-1, wherein pH is from 1 to 4.5.
 - 6. (Original) The polishing composition according to claim 2, wherein pH is from 1 to 4.5.
 - 7. (Original) The polishing composition according to claim 3, wherein pH is from 1 to 4.5.
 - 8. (Original) The polishing composition according to claim 4, wherein pH is from 1 to 4.5.
- 9. (Withdrawn) A process for reducing surface roughness (TMS-Ra) of a substrate for memory hard disk comprising the step of polishing a substrate for memory hard disk with the polishing composition of claim 1.
- 10. (Withdrawn) A process for reducing surface roughness (TMS-Ra) of a substrate for memory hard disk comprising the step of polishing a substrate for memory hard disk with the polishing composition of claim 2.
- 11. (Withdrawn) A process for reducing surface roughness (TMS-Ra) of a substrate for memory hard disk comprising the step of polishing a substrate for memory hard disk with the polishing composition of claim 3.

Docket No. 1422-0611P Applic. Serial No. 10/727,571

12. (Withdrawn) A process for reducing surface roughness (TMS-Ra) of a substrate for

memory hard disk comprising the step of polishing a substrate for memory hard disk with the

polishing composition of claim 4.

13. (Withdrawn) A process for reducing surface roughness (TMS-Ra) of a substrate for

memory hard disk comprising the step of polishing a substrate for memory hard disk with the

polishing composition of claim 5.

14. (Withdrawn) A process for reducing surface roughness (TMS-Ra) of a substrate for

memory hard disk comprising the step of polishing a substrate for memory hard disk with the

polishing composition of claim 6.

15. (Withdrawn) A method for manufacturing an Ni-P plated substrate for memory hard disk,

comprising the step of polishing an Ni-P plated substrate for memory hard disk with the polishing

composition of claim 1.

16. (Withdrawn) A method for manufacturing an Ni-P plated substrate for memory hard disk,

comprising the step of polishing an Ni-P plated substrate for memory hard disk with the polishing

composition of claim 2.

17. (Withdrawn) A method for manufacturing an Ni-P plated substrate for memory hard disk,

comprising the step of polishing an Ni-P plated substrate for memory hard disk with the polishing

composition of claim 3.

4 of 11

Docket No. 1422-0611P Applic. Serial No. 10/727,571

18. (Withdrawn) A method for manufacturing an Ni-P plated substrate for memory hard disk,

comprising the step of polishing an Ni-P plated substrate for memory hard disk with the polishing

composition of claim 4.

19. (Withdrawn) A method for manufacturing an Ni-P plated substrate for memory hard disk,

comprising the step of polishing an Ni-P plated substrate for memory hard disk with the polishing

composition of claim 5.

20. (Withdrawn) A method for manufacturing an Ni-P plated substrate for memory hard disk,

comprising the step of polishing an Ni-P plated substrate for memory hard disk with the polishing

composition of claim 6.

21. (Cancelled)
